I currently work as a software engineer at Lockheed Martin. I studied Architecture for a year and have been graphic designing for 6 years. I'm a passionate User Experience Designer with knowledge in the user-centered design. I advocate for user needs through planning, design and implementation ensuring all output reflects a solid understanding of UX principles. I have a strong desire to inspire creativity, innovative thinking and offer compelling solutions that translate into building worldclass interactive experiences and products across all digital platforms. I like tinkering with art and technology.

EDUCATION

Bachelors of Science, Computer Engineering (*Aug 2015*)

University of Maryland, Baltimore County

SKILLS

Research and Design
Affinity Diagramming
Data Analysis
Heuristic Evaluation
Typography
User Research
Visual Design
Wireframing

Programming
C
HTML
Python

Design Tools
Adobe After Effects

Adove Photoshop
Adobe XD
Procreate
Sketch

Communication
Collaborative
Creativel
ntuitive
Passionate
Problem Solver
Visionary

EXPERIENCE

Lockheed Martin: Software Engineer   (Sept 2015-Present)

- Tested LTE boards by writing test drivers saving the company over $100k.
- Streamlined software configuration from local environments to enterprise servers, which increased efficiency by 75%.
- Wrote the deployment guide as well as maintained software baseline, build, and release.
- Identified technical obstacles, designed solutions and developed proof of concept to increase business opportunities.
- Reviewed technical documents, requirements, and maintained our Linux servers.
- Partnered with mangers, engineers, and designers to increase productivity and improve the automation to help reach customer's expectations.

Verizon Corporate: Procurement   (June 2013-Aug 2013)

- Developed a system to automate procurement documents to increase efficiency by 50%.
- Evaluated requirements and suggested products and custom solutions.

SYP Group: Network Technician   (May 2011-Jan 2012)

- Diagnosed and resolved our client's servers, hardware, and network related issues.
- Redesigned data network infrastructure and configured related hardware (servers, routers, hubs, firewalls, CAT-5 wiring).
